

Curriculum Design Document

Name: Jimmy Nicholas

Subject Matter: Generating Silence: Intent, Instruction, and AI Curation in Experimental Music Practice

Cohort of Learners: Third year undergraduate students in music performance and composition. Students have foundational knowledge in music theory, instrumental or vocal practice, and composition. No prior experience with AI music tools or experimental music history is assumed.

Learning Objectives		Bloom	Session
LO 1	Identify key works, composers, and concepts from the intent-based experimental music tradition through direct encounter with selected examples	B1 Remember	In-person
LO 2	Explain the tension between a composer's stated intent and its transformation through interpretation, using selected works as evidence	B2 Understand	In-person
LO 3	Construct a personal intent statement and develop an initial prompting approach through guided experimentation with AI tools	B3 Apply	Synchronous Online
LO 4	Analyse the iterative prompting process as evidence of AI curation, identifying where and how intent was altered, redirected, or resisted across milestone attempts	B4 Analyse	Synchronous Online
LO 5	Evaluate the relationship between original intent and final outcome, making a judgement about what the process reveals for personal creative practice	B5 Evaluate	Asynchronous Online

Assessment Task	
Assessment Method	Written report and supporting documents
Overview and Purpose	Students select a concept from the intent-based experimental music tradition, state their intent, and attempt to realise it through iterative AI prompting. The task mirrors the arc of the course from historical grounding through experimentation to critical reflection. The purpose is not to produce a polished outcome but to document the negotiation between artistic intent and AI curation, and to make a judgement about what that process reveals for personal creative practice and future work with AI tools.
Instructions	Part 1: Event Score (approximately 400 words) Submit your chosen event score and explain your reasoning for the choice. Ground your intent in at least one work or concept from the experimental tradition covered in class. You may use an existing score from the tradition, adapt one, or develop your own from the work completed in Session 1. Part 2: Iteration Milestone Analysis (approximately 800 words) Document your prompting process by analysing at least three milestones drawn from your iteration log. A milestone is a moment where something shifted because the AI surprised you, resisted you, or forced a change in direction. For each milestone include a summary of the prompt used and the output received, what you noticed, and what you changed and why. Part 3: Results and reflection (approximately 400 words) Reflect on what the full iteration process revealed about your understanding of AI as a creative tool. What changed in how you think about expressing artistic intent through AI? What would you do differently if you started from a new event score? What does this process mean for how you approach AI tools in your future artistic practice?
Marking Criteria	(20%) Event score demonstrates meaningful engagement with at least one work or concept from the experimental tradition, with a clearly reasoned justification that goes beyond naming the source (45%) Iteration milestone analysis identifies at least three moments where the direction of the work shifted significantly, with each milestone accounting for the prompt used, the output received, what was noticed, and what changed and why. Milestones should be drawn directly and referenced from the supporting iteration log (30%) Reflection makes an evaluative judgement addressing both what changed in the student's understanding of AI as a creative tool and what that means for their future artistic practice (5%) Writing is clear, referenced where appropriate, and demonstrates accurate engagement with the experimental music tradition and AI concepts encountered in the course (Required) Supporting iteration log is present and demonstrates sustained engagement across 15 to 30 iterations, with each entry including the prompt, output notes, and a link or audio file. The milestone analysis in Part 2 should be traceable to entries in the log. Submissions without the iteration log will not be accepted.
Task Submission	One written document (report) with the iteration log as supporting documentation submitted via the LMS by the end of the asynchronous session week. Word count approximately 1,600 words excluding references.

Subject Matter Context for Non-Subject Matter Experts

The Fluxus movement emerged in New York in the early 1960s as a loose international network of artists, composers and performers who rejected the boundaries between art forms and questioned what art could be. Central to the movement was the event score, a short written instruction that replaced conventional musical notation with language. Event scores ranged from the poetic to the absurd to the genuinely dangerous, and their power lay not in the instructions themselves but in the gap between what was written and what a performer chose to do with it.

This unit sits at the intersection of experimental music history, artistic intent, and emerging AI tools. It is designed for third year undergraduate music students who have foundational knowledge in performance and composition but no prior experience with AI music generation or experimental music history. The unit traces a lineage of composers who replaced conventional notation with instructions, asking performers to interpret, resist, or attempt the impossible. That lineage becomes the lens through which students encounter AI as a performer, one that is infinitely literal, entirely unmusical, and resistant in its own way. The assignment asks students not to produce a polished outcome but to document the negotiation between their artistic intent and what the AI returns, and to reflect on what that reveals for their own practice.

In-person Session Summary

This session moves students through three connected arcs. The first is an escalation from John Cage's exploration of silence through La Monte Young's abstract compositions to Dick Higgins' impossible and dangerous scores. The second is a shift in activity mode, from writing and discussing to sorting and categorising to creating and doing. Running underneath both is a light but deliberate seeding of the assignment, which arrives early as context, reappears briefly as an anchor, and finally lands when students flip their worksheet and write their first event scores.

In-person Session (Lesson Plan for 2 hours of Learning and Teaching)					
Time	Type of Activity	Communication Direction T = teacher Ss = students S = student	Student Instructions	Educator Instructions	Development Resources
8 mins	Mini Lecture / Outline	T → Ss	Listen to the session outline	- Show session outline slide - Flag the assignment lightly: "What you leave with today is the start of your assignment. Everything is on the LMS - don't worry about it now" - Redirect about the assignment: "We'll come back to that", "Let's look at that later", "Let's focus on these activities first"	Slide: session outline
10 mins	Mini Lecture / Case Study	T → Ss	Listen and observe.	- Briefly introduce / reintroduce Cage (who he is, why he matters, his place in the lineage) - Play audio of 4'33". Show the score on screen after the audio plays. No explanation yet - let the work land first	- Slide: Cage biography (brief). - Audio: John Cage's 4'33" - Slide: 4'33" score image.
7 mins	Class Discussion	T ↔ Ss	- Respond to the question on screen. - Listen to how others respond differently.	- Show question: "What is this piece asking of a performer?" Take 3-4 responses - Do not resolve or explain, let the tension surface - Possible follow-ups: "Could anyone perform this?" "What does the score tell you to do?" "How would you perform this?"	Slide: discussion question
3 mins	Mini Lecture	T → Ss	- Receive your worksheet - Listen to the teacher	- Distribute worksheets with the composition/notes table visible - Briefly introduce Young and his relationship to Cage, the New School, why 1960 matters - One slide only. Be careful to not over-explain because the compositions will do the work	- Slide: Young biography (brief) - Worksheet: Part A

17 mins	Pair Activity / Case Study	$T \rightarrow Ss$ $S \leftrightarrow S$	- An event score will appear on screen. Look at it, write the title in the left column and notes on the right. Write anything that comes to mind: what you'd do, what you notice, what confuses you. - Turn to the person next to you and compare notes. You'll do this for each composition as it appears.	- Show question on screen: "How would you perform this?" - Reveal compositions one at a time (10 in total) - Give 60-90 seconds per composition for students write then briefly talk in pairs - Encourage discussion but don't force it. The minimum is a few notes on each composition - No need to comment between compositions. Compositions are skippable if time is tight.	Slides: 10 Young compositions in sequence
5 mins	Class Discussion / Feedback	$T \leftrightarrow Ss$	- Look back at the notes - Share interesting observations - Point to a specific composition if you can	- Get feedback from the class by asking a few pairs to share - Listen for terms phrases that resonate with the class - Let the students lead as much as possible	N/A
3 mins	Activity Setup	$T \rightarrow Ss$	- Arrange into groups - Spread the cards on the table. Start sorting them into groups that make sense to you. - Use the paper markers to name each group	- Facilitate the students into groups of 3-5 - Distribute the first card set, paper markers - Show sorting instructions on screen, they stay visible throughout - Avoid explaining categories or suggest directions to let groups find their own logic	- Slide: sorting instructions - Card Sets: Dick Higgins Danger Music
17 mins	Group Activity	$S \leftrightarrow S$	- Each time you get a new envelope, add the cards to your sort - You can rename categories, split them, merge them, or start fresh - Work together but feel free to disagree with reasoning	- Release sets 2 through 5 at roughly 3–4-minute intervals - Circulate and observe. Watch for interesting groupings to surface later - If needed, stimulate discussion by asking questions	Card Sets: Dick Higgins Danger Music
10 mins	Class Discussion / Feedback	$T \leftrightarrow Ss$	- Share categories your group made - Listen to what other groups called theirs - Write your favourite categories in your worksheet	- Take at least one category per group, write it up somewhere everyone can see. Ask "who else had this one?" after each. - Allow discussions between groups to emerge, but don't overshadow the activity - Close by asking the students to write their favourite categories in part B of their worksheet	Worksheet: Part B
5 mins	Mini lecture	$T \rightarrow Ss$	Listen	- Show the first part of the assignment brief on screen - Frame it by connecting the work done in this section - Show 2-3 example event scores so students can see the register - Try to keep student questions to a minimum, redirect to the LMS for details or ask them to turn over their sheet so they can see how part C aligns with the assignment	- Slide: assignment part 1 brief - Slide: 2-3 example event scores.

5 mins	Activity Setup	T → Ss	- Flip your worksheet over. You'll see 6 boxes. Your job is to fill at least 3 of them with an event score each - Look back through your notes and categories from today. Write whatever resonates - Don't aim for perfect, aim for several.	- Ask students to flip worksheets - Tell them that they are going to create their own event scores - If the class might be afraid of making mistakes, feel free to create your own silly ones to demonstrate that mistakes are ok - If the class pushes back on the number, point out Miles Davis never stopped at one take	Worksheet: Part C
3 mins	Optional Warmup	T ↔ Ss	Call out the worst event score you can think of	- Run this only if the room needs loosening. Ask: "What's the worst event score we could write?" - Take 4-5 responses, keep it fast and light. Move into drafting immediately after.	Worksheet: Part C
15 mins	Practical Activity	S	- Write your event scores in the boxes. Use the space around each box for notes - Don't think too much or too little	- Circulate quietly - If a student is stuck ask questions about what has resonated with them from their notes, the examples or life - Note any interesting scores you might want to surface in the feedback stage	Worksheet: Part C
10 mins	Class Discussion / Feedback	T ↔ Ss S ↔ S	- Read one of your scores for the class - Read one of your scores to your group	- Invite a few volunteers to share their scores. Add short comments and give praise - Feel free to ask the class similar questions from earlier like: "How would you perform this?" - Feel free to use the categories from earlier to help draw out volunteers - If the class resists, this activity also works in small groups. Monitor and provide comments and praise	Worksheet: Part C
5 mins	Mini lecture / Close	T ↔ Ss	Hold onto your worksheet. You'll need it next session. Take a photo just in case	- Remind the students of what they accomplished this session - Tell them that the next session uses AI as their event score "performer" - Tell them that they will use their worksheet in the next session and to take a picture - Remind students where the assignment details live on the LMS	- Slide: Session Recap - Slide: Session 2 preview - Slide: LMS instructions

Synchronous Online Session Summary

This session opens with the teacher demonstrating the iteration loop live, narrating their thinking and embracing failure openly. The scaffolding drops gradually as students are invited to contribute via in session, then through the LMS forum, and finally take over the loop entirely. This handoff introduces two cultures that carry through the rest of the session: working out loud as the expected mode of engagement, and the LMS forum as the natural place to go when stuck. This iteration loop connects to the practice required in part two of their assignment.

Students then move into breakout rooms, first running the loop together on a shared score, then independently on their own event score with the group as a sounding board. Each return to the main room consolidates what was found without resolving it. The session closes with philosophy, drawing from what the class produced to ask bigger questions about intent, curation and artistic culture. These questions serve as an introduction to the kinds of thinking required to complete part three of their assignment.

Synchronous Online Session (Lesson Plan for 2 hours of Learning and Teaching)					
Time	Type of Activity	Communication Direction T = teacher Ss = students S = student	Student Instructions	Educator Instructions	Development Resources
10 mins	Mini lecture / Outline	T → Ss	Listen to the session outline	- Show session outline slide. Link to assignment lightly: "What you leave with today is everything you need to start, run and finish your assignment." - Bridge from Session 1: "Last session you wrote event scores. Today you find out what happens when an AI tries to perform them." - Don't take assignment questions redirect to the close.	Miro: Session Outline
5 mins	Mini lecture	T → Ss	Look at the iteration process	- Share your screen to show the iteration loop template - Walk through each step: 1. Start with your event score 2. Turn it into a prompt 3. Listen to the artefact 4. Analyse against your event score 5. Don't forget to log 6. Repeat steps 2 to 5	Miro: Iteration Loop Template
7 mins	Demonstration	T → Ss	- Watch the Miro board - Notice what the teacher is doing at each step of the loop	- Show the Miro Board and the AI tool side by side. - State your intent out loud: "I want to recreate 4'33" inside an AI." - Run the loop once solo while narrating your thinking process out loud - Note that it takes between 45-60 seconds for each generation. Use this time to start filling in the log, paste the prompt used in the chat, theorise what the result might be or answer questions from the students - At a natural sticking point say out loud: "I'm not sure what to do here. What should I try?" Take a couple of verbal responses from chat. This is to demonstrate the working out loud approach introduced later. - Celebrate failure and uncertainty by framing them as signs that we are pushing the AI to its limit. If the AI says that the song is ready, but it didn't appear, this is a good sign because it means we have broken it	- Miro: Iteration Loop Template - Tool: Musical AI tool (Google Gemini is free and accessible)
7 mins	Practical Activity / Class Discussion	T ↔ Ss	- Notice what the teacher is doing at each step of the loop - Add suggestions through voice, chat or LMS forum	- Keep running the loop and start inviting suggestions from the students on what to do at certain points - At a natural sticking point this time, model the LMS forum format explicitly by typing it live into the LMS forum on screen while narrating: - This is my problem - This is what I've tried - This is what I'm considering - If time allows, tell the class that your next action will come from one the suggestions in the LMS forum	- Miro: Iteration Loop Template - Tool: Musical AI tool - Website: LMS forum

6 mins	Practical Activity / Class Discussion	Ss → T	- Add suggestions through voice, chat or LMS forum - Take the lead	- Continue running the loop with the students making most of the decisions and the teacher facilitating - Continue using the LMS forum as a way to take suggestions - Aim for the class to be mostly independent in their choices and encourage them to work out loud - If you haven't already, set up breakout rooms for the next activities	- Miro: Iteration Loop Template - Tool: Musical AI tool - Website: LMS forum
5 mins	Activity Setup	T → Ss	- Access the Miro board and AI tool - Listen to the instructions before heading to a breakout room	- Explain the task clearly: - Choose a breakout room (4 people max) - As a group, choose one of these event scores from the first session - Run the loop together - Log each attempt - Discuss as a group the next step in the loop - After 15 mins, your group will report your findings back to the class - Open the breakout rooms	- Miro: Group Iteration Loop - Miro: Young and Higgens Event Scores - Tool: Musical AI tool - Website: LMS forum
15 mins	Practical Activity / Group Activity	S ↔ S	1. As a group, choose one of these event scores from the first session 2. Run the loop together 3. Log each attempt 4. Discuss as a group the next step in the loop 5. After 15 mins, your group will report back to the class	- Visit each breakout room briefly. - If a group is stuck ask questions like: "What's the gap between what you wanted and what you got?" - Alternatively, direct them to use the LMS forum (and reply to them there) - Don't resolve tensions directly	- Miro: Group Iteration Loop - Miro: Young and Higgens Event Scores - Tool: Musical AI tool - Website: LMS forum
5 mins	Class Discussion / Feedback	S → Ss	- Share at least one tension or finding from your group - Listen to the other groups	- Take one finding per group - If time, write the key tensions in Miro where everyone can see - Calibrate across groups without resolving	- Miro: Young and Higgens Event Scores - Miro: Feedback Notes space - Website: LMS forum
5 mins	Activity Setup	T → Ss	- Listen before heading back to your breakout room - Get your score ready	- Explain the next activity: - Same groups and rooms as before - Work on your own event score - Keep working out loud - Don't forget to log - Everything you do here could be part of your assignment - Quickly show the students how to export the table as a CSV file - Direct absent students to choose an unused Young or Higgens score provided score from Miro or approve one of their own creations, before asking them to join another group	- Miro: Individual Iteration Loop - Tool: Musical AI tool

20 mins	Practical Activity / Individual Activity in Groups	$S \leftrightarrow S$	- Work on your own event score by running the loop - Keep working out loud by telling your group what you're trying, what you're getting, where you're stuck - Don't forget to log	- Visit rooms and listen for interesting friction - Unblock where needed or direct to the LMS forum (and reply to them there) - Stimulate the conversation in quieter rooms - Maintain the frame that failures and tensions are a sign of success - Flag the logging: "If you looked back at your Miro log later, could you reconstruct your thinking?"	- Miro: Individual Iteration Loop - Tool: Musical AI tool - Website: LMS forum
5 mins	Class Discussion / Feedback	$S \rightarrow Ss$	Share tensions or findings from that activity	- Take at least one finding per group - If time, write the key tensions in Miro where everyone can see - Keep it brief as this is a handoff into the philosophical discussion - Surface a range of walls, surprises, unexpected outputs etc but try not to resolve anything - Remind the students to export their tables and download their audio results	Miro: Feedback Notes space
15 mins	Class Discussion	$T \leftrightarrow Ss$	- Respond to the questions as they appear - Answer verbally or type directly into Miro - Listen and read the other responses	- Seed the reflection part of the assignment though a class discussion - Draw from the feedback notes space to form a question and write it visibly in Miro. - Take responses verbally or from Miro before moving to the next question - You don't need to use all the notes or resolve anything directly - Possible pivots from feedback notes to questions: "You mentioned [x] happening with the output. What does that tell us about who is really in control of the intent?" "A few groups hit [x] as a wall. If the AI always does that, what does that mean for the artist?" "Someone said [x] surprised them. Was that the AI failing, or the AI interpreting?" "If nobody in this room had questioned the output, what kind of artistic culture would that build?" "How did the AI pushback against you?"	Miro: Feedback Notes space

10 mins	Mini Lecture	T → Ss	Listen and follow along	- Show the session activities and assignment structure side by side - Walk through each part: "This is what we did today, and this is where it lives in your assignment." - Then switch to the LMS and show: - where the assignment brief lives - where the rubric is - where the resource list is - how to navigate between them. - Demonstrate the Miro CSV export again if needed	- Miro: from today's session - Website: LMS
10 mins	Class Discussion and Close	Ss → T	Ask anything you need to before you work independently on your assignment	- Take questions - Keep answers tight and redirect detail questions to the LMS. - Remind the students that the forum is the support space for independent work	Website: LMS

Asynchronous Online Session Summary

The asynchronous session is not a taught session, but the support infrastructure students move through as they complete their assignment independently. Content is released progressively as students need it. The assignment section is available from day one as a stable reference point, reducing the need for clarifying emails. Session 1 and 2 content is released close to each session to reinforce and extend what happened in the room. The Session 3 hub opens during Session 2 and connects everything, giving students a single starting point to find what they need quickly. The issues forum and AI concert hall open at the same time, keeping the working out loud culture alive and ensuring no student arrives at the hard parts alone.

Asynchronous Online Session (Lesson Plan for 2 hours of Learning)					
Time	Type of Activity	When available to the students	Student Instructions	Educator Instructions	Development Resources
10 mins	Reading / Reference / Assignment Content	Day 1	- Read through the full assignment brief carefully - This section is your central reference point for the entire assignment - Come back here whenever you need to check what is expected, when things are due, or how you will be assessed.	- Monitor that students have accessed this section before Session 2 - Expected output: Student understands the three parts of the assignment, the due date, and the assessment criteria before Session 2 begins	- LMS: assignment brief - LMS: learning objectives - LMS: rubric - LMS: submission guidelines - LMS: academic integrity statement - LMS: due date
N/A	General Questions Forum	Day 1	- Post any questions about the course, sessions, or assignment that are not answered in the assignment brief - Check whether your question has already been answered before posting	- Monitor and respond throughout the course - Expected output: Students can find answers to administrative and course questions without direct contact	LMS: forum
20 mins	Resource / Reference / Session 1 content	Within 24 hours after Session 1	- Review the slides and recordings from Session 1 to revisit anything - Check compositions you want to look at again or catch up if you missed anything	- Monitor access and redirect students who did not attend Session 1 here before Session 2 - Ensure resources are clearly labelled and links are current before release - Expected output: Student can recall key compositions from Cage, Young and Higgens	- LMS: Session 1 slides - LMS: Young compositions reference sheet - LMS: Higgins Danger Music card set (digital version)

30 mins	Research / Reading / Session 1 content	Within 24 hours after Session 1	- Choose at least one reading from the list which go deeper into the artists and movement covered in Session 1 (Optional) - Use them to strengthen the reasoning behind your event score in Part 1 of the assignment	Expected output: Student has at least one academic source they can cite in Part 1 of the assignment.	LMS: academic reading list on Cage, Young, Higgins and the Fluxus movement
10 mins	Reference / Session 2 content	Within 24 hours before Session 2	- Review the diagram showing the six the iteration loop steps introduced in the second session - Return here when you need a reminder of the steps while working on Part 2 of your assignment	Expected output: Student can follow the iteration loop independently during the assignment	LMS: Iteration Loop Diagram
10 mins	Reference / Session 2 content	Within 24 hours before Session 2	- Review these prompting strategies to help you work more effectively with AI tools during Session 2 and your independent iteration work - They can be used as part of the iteration loop in Part 2 of the assignment	- Monitor whether students are accessing this resource during the independent work period - Expected output: Student can apply at least one strategy within their iteration loop	LMS: Prompting Strategies
10 mins	Reference / Session 2 content	Within 24 hours before Session 2	- Review the steps for exporting your Miro iteration log as a CSV file, demonstrated at the end of Session 2 - Use this if you need to export your log for Part 2 of your assignment	- Educator instructions: Confirm the export steps match the current version of Miro before release - Expected output: Student can export their Miro log without assistance	LMS: CSV export instructions for Miro tables
30 mins	Reading / Reference / Session 2 content	Within 24 hours before Session 2	- Choose at least one reading from this list to deepen your understanding of how AI generates music, building on the concepts and tension explored in Session 2 - Use these to support the gap analysis in Part 2, and reasoning in Part 3 of your assignment	- Monitor reading list access during the independent work period - Expected output: Student has at least one source they can cite in Part 2 or 3 of their assignment	LMS: academic reading list on AI and how LLMs generated music
N/A	Issues / Tensions and Problems Forum	Within 24 hours before Session 2	Post here when you are stuck during your independent work. Please include what you are trying, what you have attempted, and what you are considering next	- Monitor and respond to posts throughout the independent work period - Expected output: At least one post per student during asynchronous session or during independent work	LMS: forum
20 mins	Reference	During Session 2	- Use this flowchart to diagnose where you might be stuck during assignment - Return here at any point during your assignment before posting in the forum or contacting the educator	- Monitor whether students are accessing this resource before posting in the forum - Expected output: Student can identify why they are stuck and determine a next step independently	LMS: Issue Flowchart
30 mins	Reading	During Session 2	- Choose at least one reading from this list to deepen your thinking on the questions raised in the Session 2 philosophical discussion - Use these to support the evaluative judgement required in Part 3 of your assignment	- Monitor reading list access during the independent work period - Expected output: Student has at least one source they can cite in Part 3 of their assignment	LMS: academic reading list on music and AI philosophy

10 mins	Navigation Hub	During Session 2	Start here when you need to quickly find information and resources for your assignment	- Review all links before release and confirm they are current - Expected output: Student can navigate to any resource they need without contacting the educator	LMS: Links to Session 1, Session 2, assignment section and forums per assignment part
N/A	AI Concert Hall Forum	During Session 2	- Post your good, bad and ugly AI-generated performances from your iteration process here - Browse other students' posts	- Seed the forum during Session 2 with an artifact from the demonstration and monitor contributions throughout the independent work period. - Expected output: At least one post per student before submission	LMS: forum
N/A	Reminder Messages	Ongoing	Receive periodic reminders to help you stay on track throughout your independent work	- Schedule reminders after Session 2, at the halfway point of the independent work period, and three days before submission - Keep the tone light and inviting. Avoid statements that might trigger strong negative feelings - Expected output: Students feel supported and remain engaged with their iteration process and submit on time	LMS: Reminders to help the students stay on track
